Reference for Task Force Innovations LLC

To Whom It May Concern,

Task Force Innovations LLC is a company you can trust to deliver a superior product. I would not say such a thing about any company unless I was absolutely convinced that it was true.

As Director of the QSI International School of Bishkek, Kyrgyzstan we had need for at least four additional classrooms to accommodate our recent increase in student enrollment. With limited space to build on a rented parcel of land I felt it would not be a wise investment to build a brick and mortar structure. I had some familiarity with container style work spaces.

On the school grounds a two story container arrangement had been arranged for classrooms that actually has given us a number of options as to how they can best be utilized.

From start to finish the project took three months and really saved the day for us. The project was cost effective and also gives us the flexibility to move the structures to a permanent site if we so choose to do so some day.

We are immensely pleased with the portable building and have absolutely no problems with workmanship or usability of the structure.

If you are in need of engineering services and construction of a wide variety of structures for many uses I highly recommend this company to you.

Sincerely,

Gerald F. Craig
Director
QSI International School of Bishkek
